Test cases execution report

Issues discovered

1. Sort orders do not account for product discounts, leading to inaccurate sorting based on price.
2. Products added to the compare list persist indefinitely on the Compare page, even after leaving the session or navigating to the homepage. This adds friction to the user experience as users often have to go to the compare page to remove them.
3. All pages listed under the Information side menu are missing, resulting in broken links and incomplete content.
4. The fashion Manufacturer filter does not display any results, and users cannot revert to "All Manufacturers" after selecting it.
5. Filters under "Availability" such as In Stock and Not Available do not change the displayed results.
6. Switch suppliers to Fashion Suppliers → Go back to the previous page. Switching to All suppliers again results in 404.
7. On the search result page, if you move the first end of the price slider to the last end, you cannot move the first end of the slider back again, which leads the user to a page with no results.

Shopping and checkout in logged-in state

	Scenarios	Pass/Fail
1	Verify adding a product to the cart and ensure you can checkout by signing in or signing up.	✅
2	Verify the details of the product are displayed correctly.	✅
3	Verify editing of the quantity works as expected and immediate updates are reflected for the cart value.	✅
